Please DELETE the Abstract in its entirety and substitute the attached new Abstract shown below.

A crutch, which does not give pressure on the tissues, muscles and nerves of the user's armpit, and provides a stabilized walking to a user, is disclosed. The crutch includes a support rod (12), a cross-pad (13)-coupled to an upper end of the support rod-(12), a hand piece (14)-provided at a mid point of the support rod-(12), and a cap (15)-for preventing the crutch from skidding mounted on a lower end of the support rod-(12). An upper part corresponding to a section between the cross-pad (13)-and a predetermined point below the hand piece (14)-of the support rod (12)-is curved to have a smaller radius, while a lower part corresponding to a section between the predetermined point of the support rod (12)-and the lower end of the support rod (12)-is curved to have a larger radius.
